**Empowering cities and organizations to turn waste into opportunity with smart, sustainable solutions.**

Reclevo blends "Recycle" and "Revolution" symbolizing a modern movement for sustainability and circular innovation. Transforming waste and potential into renewed purpose.

## The Waste Management Crisis Plaguing Our Cities

What is the impact? Unhygienic conditions, citizen dissatisfaction, increased operational costs, and environmental violations.

The Challenge

## Critical Issues in Waste Management

Understanding the challenges that plague our current waste management systems is the

first step towards building sustainable solutions.

### Unverified Stakeholders

Many waste management operations are handled by unregistered and unauthorized individuals or organizations. This lack of verification leads to unsafe practices, illegal waste transportation, and increased risk of environmental hazards.

### Operational Inefficiencies

The current waste and sewage management infrastructure often suffers from severe inefficiencies. Many facilities remain underutilized due to poor planning, limited accessibility, or lack of coordination among stakeholders.

### Compliance & Sustainability Hurdles

Ensuring compliance with environmental regulations and maintaining sustainable waste practices is a significant challenge. Illegal dumping and disregard for environmental guidelines are common hurdles.

Our Solution

## Complete Asset Management for Panchayats & Municipalities

A comprehensive recycling and waste management solution that can be implemented step by step, whether for a school, business, or community.

01

### Unified Digital Infrastructure

for Assets & Workforce

A single mobile app for asset tracking, workforce attendance, and operational transparency.

02

### Smart Waste Processing

& Maintenance Optimization

Automated scheduling and real-time dashboards to streamline waste collection and reduce costs.

03

### AI-Powered Reporting

& Predictive Analytics

Actionable insights with predictive maintenance and compliance monitoring for better decision-making.
